

Californian Kingsnake care sheet

PROFILE

Common Name: Californian kingsnake or Cali King

Latin Name: *Lampropeltis getula californiae*

Native To: North America

Size: 3-6ft

Life Span: 20+ Years

HOUSING REQUIREMENTS

Environment:

Found throughout California and edging into the surrounding states, Cali Kings are an adaptable snake capable of living in a variety of environments. From swamps to semi-arid deserts.

Vivarium Size:

We recommend a minimum size vivarium of 36x15x15 with plenty of places to hide for an adult. Hatchlings and juveniles should be kept in significantly smaller enclosures.

Substrate:

We recommend a substrate for desert dwelling reptiles, desert mix, leolife and utilising sands and rocks. With low branches and hides available.

Food and Water:

Water should be provided at all times. A bowl large enough for the snake to soak in will aid in shedding. Cali kings, like all snakes, are carnivorous. In the wild they will eat anything of appropriate size that they can overpower.

Rodents, lizards, birds, eggs and other snakes. In a captive environment, Cali Kings will feed on mice, rats, gerbils, hamsters, chicks and multimammates. We only recommend feeding pre-killed prey items. It is now illegal to feed live prey to snakes in the U.K. as, not only is it unethical, if the snake is not hungry and does not wish to feed, the mouse will turn on the snake and start biting away at it – often leading to infections and death.

Heat/Light Requirements:

Cali kings require heating with one side of the vivarium being the designated 'cool' end and the other being the 'hot' or 'basking' area. This can be achieved by placing a heat source on one side of the vivarium.

As they are cold blooded animals, their body temperature is the same as that of the environment around them and therefore Cali Kings will move around the vivarium until they find their optimum temperature. At night we recommend a temperature drop of about 5-10°C.

Below are the ideal temperatures for your Californian Kingsnake, all of which can be thermostatically controlled:

Day (cool end): 22-26°C

Day: (warm end): 29-31°C

Night: 20-24°C

Please note that this care sheet is only for your basic husbandry knowledge and that it is always recommended that you do further reading.
